

I'VE GOT BEDBUGS. NOW WHAT?

Let JT EATON help!

The JT EATON KILLS BEDBUGS PRODUCT LINE offer several solutions. Combined with such practices as laundering and vacuuming, the JT EATON KILLS BEDBUGS PRODUCT LINE delivers a knockout punch to bedbug infestations!

STEP 1 Clean your room. Start by removing your bed linens and laundering them in hot water. (If a comforter or other bedding cannot be washed, at least heat in a dryer at highest heat for at least twenty minutes so that the bugs are killed.) Then, take a look at the furnishings: Experts agree that clutter can compound a bedbug infestation because it gives the bugs extra places to hide. Wash and dry clothes and place items in black trash bags and seal them to control any bedbugs (eggs, larvae and adults) until you have sprayed the room. Vacuum everywhere because crevices that are free from particles will be better able to accept insecticides. Don't forget to empty your vacuum immediately after into a plastic, sealable bag so they don't reinfest your home.

STEP 2 Dismantle everything! When the room is down to the basic furniture, remove drawers from desks and dressers and take apart the bed frames. These actions can expose bedbug hideouts. Use **JT EATON KILLS BEDBUGS INSECTICIDE #204-O** (Red Label) on suspected areas. The unique oil-based pyrethrin spray will offer quick control, and is labeled for use in a whole range of areas, including mattresses, box springs, wall-ceiling joints, baseboards, behind and underneath furniture, cushions and furnishings. Make sure you get the seams of the mattress and box springs.

STEP 3 Seal openings. But before you caulk around areas where pipes and wire penetrate the floor or walls (around electrical outlets or cracks in the baseboard and door frame, for example), use **JT EATON KILLS BEDBUGS AND CRAWLING INSECTS POWDER #203** (Green Label) in the openings. Made from diatomaceous earth, this powder will offer long-lasting protection against these tiny pests from making a comeback in these areas.

STEP 4 Use a residual spray. **JT EATON KILLS BEDBUGS II INSECTICIDE #207-W** (Blue Label) is a synthetic pyrethroid that offers protection for up to 16 weeks. Like its sister product, it too can be used on mattresses and other furnishings, as well as on your home's interior perimeter.

STEP 5 Prevent reinfestation! One of the most common ways for homes to become infested is through bedbugs that arrive via the seams of your luggage after a long trip. Reduce that risk to you by using **JT EATON BEDBUG CONTROL FOR LUGGAGE AND MATTRESSES #208-W6Z** (6 oz. Pump Spray Red Label) (Refer To Orange Dot) on your suitcases and other travel items, providing up to six weeks protection. The permethrin formula will discourage "hitchhiker" insects from entering luggage.

All Products In The JT EATON™ KILLS BEDBUGS Product Line Are Proudly Made In the U.S.A.

The J.T. Eaton Family of Bedbug Control Includes:

JT EATON KILLS BEDBUGS INSECTICIDE
